NoName Airlines

Fly with NoName Airlines

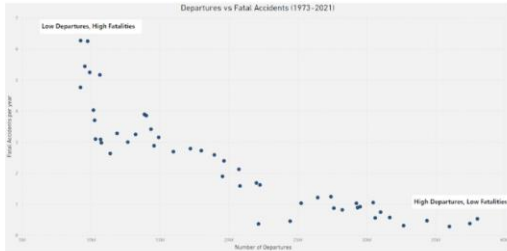

May 10, 2023

Have you been daydreaming about your next travel opportunity? Warm, sunny beaches of Cabo San Lucas? The hustle and bustle in the city that never sleeps, New York City? Homecooked meals across the country with your beloved family? My latest trip was on NoName Airlines flying high above the plains of the Midwest until I reached the sandy shorelines in Florida. The trip was comfortable as I sipped on a glass of white wine and watched the latest movie. In just a few short hours, I was reunited in the welcoming embrace of my grandparents. It is true that XYZ Airlines had a catastrophic misfortune this year. On the other hand, it is also true that the media has been abusing this story to get views. Luckily for us all, my dive into the accurate data will encourage us all to get back into another safe, efficient, and enjoyable flight.

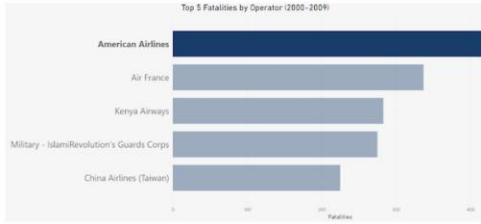

It's no secret that the rumors say we should be second-guessing our safest mode of transportation, flying. On the contrary, flying is safer than ever.

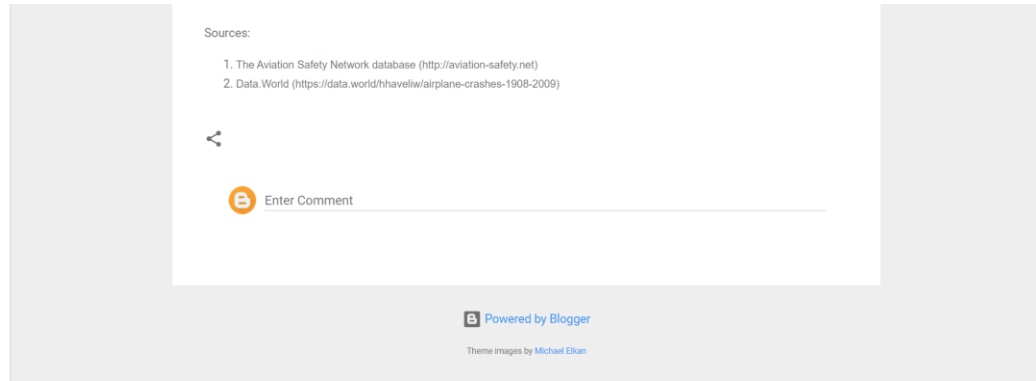

In fact, airline fatalities have shown a steady decrease since 2011. (*Aviation Safety Network, 2021*) To add to that fact, aircraft fatalities actually have decreased even though the number of departures has grown immensely. (*Aviation Safety Network, 2021*) Even with over 35,000 flights every year, the number of fatal accidents has diminished to just 1 per year. Those are odds I would be willing to bet my life on!

Although there may be one airline that is concerning in the US, I rest assured knowing that NoName Airlines is nowhere near the top 5 fatalities list. (*Data.world, 2016*)

So turn off the news and go back into dreamland. Imagine all of the places you can visit and sights that can be experienced through the magic of flying. The truth lies in the data, not the television screens. Come join me in sunny Florida, I'm just one peaceful flight away!
